

auto engine moto

XADO "Gel Revitalizant for gasoline and diesel engines" are two of our best selling products but a car is not the only mechanical device we are aimed at. Consider scooters, four wheelers, lawn mowers, chain saws, and motorcycles, for instance. **XADO** has engineered a product specifically for small engines, **XADO-MOTO**!

XADO-MOTO is beneficial for all small engines, including home appliances. It works in small engines both with combined and separate fuel and oil systems.

XADO-MOTO application benefits:

- increases service life by at least 3 times;
- reconditions cylinders;
- increases compression;
- reduces harmful emissions;
- protects friction surfaces against wear;
- reduces noise and vibration;
- saves fuel;
- increases engine power.

When it is enough to recondition a single cylinder, we have **XADO "Gel Revitalizant for Cylinders"**. It works perfectly within the cylinder wall of an engine, as the piston rubs within the cylinder, representing a friction pair. As the piston and cylinder wall rub together, they wear away microscopic particles. This deteriorates the fit and mating of the parts, increasing tolerances while reducing the efficiency of the engine. When parts wear down, the fit becomes loose and sloppy, increasing the noise level while the fuel efficiency and power of the engine suffer. Until now, the only solution was mechanical intrusion, taking the vehicle off the road for expensive mechanical repairs, tearing the engine down, replacing worn parts, and rebuilding the engine. The life cycle of a rebuilt engine is considerably less than a new one.

A special test for piston/cylinder groups has been made by an Independent Expert Laboratory. A spent engine was chosen for the test. The first and fourth cylinders underwent revitalization. As a result, the compression in the reconditioned cylinders increased by 1 to 1.5 atmospheres. This was achieved in only 15 hours of cold running. In regular mode, the compression increases from 10 to 14 atmospheres during the first 250-300 kilometers.

Test results of the engine

- Cylinder circle before treatment
- Metal wear
- Cylinder circle after treatment
- Revitalization (a new coating has been formed)

XADO

has the cure
for

any machinery!
